DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 6-9 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 6-7 and 9 of U.S. Patent No. 6,602,561. Although the conflicting claims are not identical, they are not patentably distinct from each other because the scope of the U.S. claims comprises the steps of adding wax to materials of the electrode and compressing

the wax added material, and heating the compressed the wax added material to evaporate and remove the wax at the recited temperature as claimed in claim 6; comprises the step of mixing a hard material of a ceramic material with a binder of soft material, compressing the mixture to form an electrode, and heat treating the electrode as claimed in claims 7 and 8. The first difference between the U.S. claims and the above claims is whether the recited compression-molding is the same as the compression step of the patent claims. The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the scope and the content of the patent claims because the patent claims recited the compression of the mixture of the powders to form an electrode, the compression and the recited compression-molding are equivalent terms.

The second difference between the U.S. claims and claims 7-9 is the recited matter having electrical conducting property. Because it has been held that "those portions of the specification which provide support for the patent claims may also be examined and considered when addressing the issue of whether a claim in the application defines an obvious variation of an invention claimed in the patent", *In re*

Vogel 164 USPQ 619, and because Co is one of the binder, the binder and the recited matter having electrical conductive property are a same material.
